

ABSTRACT OF THE DISCLOSURE

A display output terminal is connected to a genuine vehicle on-board display unit. A first image input terminal is connected to a non-genuine image output equipment. Also,
5 a second image input terminal is connected to a genuine vehicle on-board image output equipment. A circuit portion delivers at least one of a signal S1 fed to the first image input terminal, and a signal S2 fed to the second image input terminal, from the display output terminal.
